Not illustrated. 1917 Excerpt: .in many other cases we find the infliction of wounds followed by the formation of features which are normally present in the conservative organs. Consequently the doctrine of reversion finds support, not only in the facts of paleobotanical anatomy, but also in the much more richly exemplified doctrine of conservative parts. It is further clear that we cannot interpret all structural peculiarities which result from injury as reversions to a former condition of organization, but only those which are definitely paralleled by known conditions in fossil forms or are illustrated in the anatomy of the conservative organs--the leaf, reproductive axis, and stem, or at least some of these. Carefully as the doctrines of recapitulation and of conservative parts must be applied to elucidate the course of evolution, the principle of reversion must be invoked in phylogenetic studies with even greater precautions. A wide knowledge of fossil...
